## Sheumann Announces New Photonics Focused Incubator

[BILLERICA, MA, FEBRUARY] — Sheumann has long been dedicated to innovation in the photonics and semiconductor industry. Along with its recent major expansion and relocation to Billerica, MA, Sheumann is announcing its brand-new incubator space, The Incubator @ Sheumann.

The Incubator, Sheumann's photonics-focused accelerator, will occupy the entire 20,000 square-foot top floor of the Sheumann building. This unique space is for companies that would like to leverage Sheumann's existing photonics and semiconductor manufacturing capabilities or house their own equipment in a dedicated cleanroom. A key part of Sheumann's newly outfitted headquarters is a 18,000 square-foot first floor cleanroom that includes equipment to grow, process, and package GaAs and InP wafers. It is rare to find a building that is optimized and permitted for semiconductor manufacturing, with space available for other companies. Sheumann looks forward to becoming a nexus for innovative companies that would like to manufacture their own technology.
